Match the word to its meaning: answers

decimal		the value of one part when a whole is divided into one hundred equal parts.
denominator		a number written as one whole split into equal parts, with a number of those parts taken
division		for every hundred; shown with a % sign.
equivalent fraction		a number of parts out of a hundred
fraction		the value a digit has because of where it sits in a number
hundredths		a number written with a point, where the digits after the point are parts of a whole
percent		the number below the line in a fraction, showing how many equal parts the whole is split into
percentage		the operation of splitting a number into equal parts.
place value		a different fraction that means the same amount as another fraction.
ten-thousandths		the numbers zero, one, two, three, and so on, with no fraction or decimal part.
tenths		the value of one part when a whole is divided into one thousand equal parts.
thousandths		the value of one part when a whole is divided into ten thousand equal parts.
whole numbers		the value of one part when a whole is divided into ten equal parts.
