Converting between

ułamki dziesiętne procenty

decimals and percentages

Write 0.5 as a ^{percent}percentage

Write 0.5 as a ^{percent}percentage

$$0.5 \times 100 = 50\%$$

Write 0.25 as a ^{percent}percentage

Write 0.25 as a ^{percent}percentage

$$0.25 \times 100 = 25\%$$

Write 30% as a ułamek dziesiętny
decimal

Write 30% as a ułamek dziesiętny
decimal

$$30 \div 100 = 0.3$$

Write 0.07 as a ^{procent}percentage

Write 0.07 as a ^{percent}percentage

$$0.07 \times 100 = 7\%$$

Write 6% as a ułamek dziesiętny
decimal

Write 6% as a ułamek dziesiętny
decimal

$$6 \div 100 = 0.06$$

Write 0.125 as a ^{procent}percentage

Write 0.125 as a ^{percent}percentage

$$0.125 \times 100 = 12.5\%$$

Write 4.5% as a ułamek dziesiętny
decimal

Write 4.5% as a ułamek dziesiętny
decimal

$$4.5 \div 100 = 0.045$$

Write 1.3 as a ^{percent}percentage

Write 1.3 as a ^{percent}percentage

$$1.3 \times 100 = 130\%$$

Write 250% as a ułamek dziesiętny
decimal

Write 250% as a ułamek dziesiętny
decimal

$$250 \div 100 = 2.5$$

Write 0.0025 as a ^{procent}percentage

Write 0.0025 as a ^{percent}percentage

$$0.0025 \times 100 = 0.25\%$$

Writing one number as a
percent
percentage of another

Write 25 as a ^{procent}percentage of 100

Write 25 as a ^{percent}percentage of 100

$$\frac{25}{100} = 25\%$$

Write 7 as a ^{percent}percentage of 10

Write 7 as a ^{percent}percentage of 10

$$\frac{7}{10} = \frac{70}{100} = 70\%$$

Write 13 as a ^{procent}percentage of 20

Write 13 as a ^{procent}percentage of 20

$$\frac{13}{20} = \frac{65}{100} = 65\%$$

Write 12 as a ^{procent}percentage of 25

Write 12 as a ^{procent}percentage of 25

$$\frac{12}{25} = \frac{48}{100} = 48\%$$

Write 18 as a ^{procent}percentage of 40

Write 18 as a ^{procent}percentage of 40

$$\frac{18}{40} = \frac{45}{100} = 45\%$$

Write 21 as a ^{procent}percentage of 50

Write 21 as a ^{procent}percentage of 50

$$\frac{21}{50} = \frac{42}{100} = 42\%$$

Write 9 as a ^{procent}percentage of 12

Write 9 as a ^{procent}percentage of 12

$$\frac{9}{12} = \frac{3}{4} = \frac{75}{100} = 75\%$$

Write 27 as a ^{procent}percentage of 60

Write 27 as a ^{procent}percentage of 60

$$\frac{27}{60} = \frac{9}{20} = \frac{45}{100} = 45\%$$

Write 34 as a ^{procent}percentage of 80

Write 34 as a ^{procent}percentage of 80

$$\frac{34}{80} = \frac{17}{40} = \frac{42.5}{100} = 42.5\%$$

In a test Ali scored 57 out of 75.

What ^{procent}percentage did Ali score?

In a test Ali scored 57 out of 75.

What ^{procent}percentage did Ali score?

$$\frac{57}{75} = \frac{19}{25} = \frac{76}{100} = 76\%$$

100% is £130 000

Percentage word problems

Procentowe

A coat costs £40.

In a sale it is ^{obniżony} reduced by 10%.

What is the sale price?

A coat costs £40.

In a sale it is ^{obniżony} reduced by 10%.

What is the sale price?

10% is £4

$$£40 - £4 = £36$$

30% of a class of 30 students walk to school.

How many students walk to school?

30% of a class of 30 students walk to school.

How many students walk to school?

10% is 3

30% is 9

9 students

A phone costs £250 plus 20% VAT.

What is the total price?

A phone costs £250 plus 20% VAT.

What is the total price?

10% is £25

20% is £50

$£250 + £50 = £300$

Sam earns £800 a month and is given a 5% pay
rise.

What is Sam's new monthly pay?

Sam earns £800 a month and is given a 5% pay
rise.

What is Sam's new monthly pay?

10% is £80

5% is £40

$$£800 + £40 = £840$$

A jacket cost £60 and now costs £45.

What is the ^{procentowa}percentage reduction?

A jacket cost £60 and now costs £45.

What is the ^{procentowa}percentage reduction?

$$\text{Reduction} = \text{£}15$$

$$\frac{15}{60} = \frac{25}{100} = 25\%$$

A town's population grows from 8000 to 8600.

What is the procentowe zwiększenie
percentage increase ?

A town's population grows from 8000 to 8600.

What is the ^{procentowe zwiększenie}
^{percentage increase} ?

$$\begin{array}{l} \text{Zwiększenie} \\ \text{Increase} \end{array} = 600$$

$$\frac{600}{8000} = \frac{7.5}{100} = 7.5\%$$

A laptop costs £480 in a sale, after a 20%
rabatu
discount.

What was the price before the sale?

A laptop costs £480 in a sale, after a 20%

rabatu
discount.

What was the price before the sale?

80% is £480

10% is £60

100% is £600

Maya scored 34 out of 40 in a test.

Ben scored 82%. Who did better?

Maya scored 34 out of 40 in a test.

Ben scored 82%. Who did better?

$$\frac{34}{40} = \frac{85}{100} = 85\%$$

85% > 82%, so Maya did better

A television costs £1200.

It is ^{obnizony}reduced by 15%, then by a further 10% of
the new price.

What is the final price?

A television costs £1200.

It is ^{obniżony} **reduced** by 15%, then by a further 10% of
the new price.

What is the final price?

15% of £1200 is £180

new price is £1020

10% of £1020 is £102

A car costs £12 000.

It loses 20% of its value in the first year and
15% of its value in the second year.

What is it worth after two years?

A car costs £12 000.

It loses 20% of its value in the first year and
15% of its value in the second year.

What is it worth after two years?

after year 1 is $£12\,000 \times 0.8 = £9600$

after year 2 is $£9600 \times 0.85 = £8160$
