

IntroductoryFractionsStarters: key vocabulary

ascending order	arranged from smallest to largest
common denominator	a bottom number shared by two or more fractions, used for adding or comparing them.
common factor	a number that divides exactly into two or more other numbers.
decimal	a number written with a point, where the digits after the point are parts of a whole
denominator	the number below the line in a fraction, showing how many equal parts the whole is split into
equivalent	having the same value, even though it is written differently
fraction	a number written as one whole split into equal parts, with a number of those parts taken
improper fraction ..	a fraction with a top number larger than or equal to its bottom number
mixed number	a number made of a whole amount and a fraction, such as $3\frac{1}{2}$
multiple	a number you get by multiplying another number by a whole number
numerator	the number above the line in a fraction, showing how many equal parts are taken
proportion	a relationship where two amounts change by the same factor
remainder	the amount left over when a number cannot be split into equal whole groups
sector	a slice of a circle between two radii
simplify	to write something in its smallest or plainest form without changing its value
