

Font probe

Every language this instance is configured for, with the font it would be set in. One letter of each language's own script is printed beside it: a font that is installed but cannot print the script it was chosen for would pass a check by name and still set a page full of holes.

Albanian (sqi), Noto Serif: A
Amharic (amh), Noto Sans Ethiopic: ሀ
Arabic (ara), Noto Naskh Arabic: ا
Bengali (ben), Noto Sans Bengali: ঞ
Bulgarian (bul), Noto Serif: A

Turkish (tur), Noto Serif: A

Twi (twi), Noto Serif: **A**
Ukrainian (ukr), Noto Serif: **A**
Urdu (urd), Noto Nastaliq Urdu: **ا**
Vietnamese (vie), Noto Serif: **A**
Welsh (cym), Noto Serif: **A**
Yoruba (yor), Noto Serif: **A**
Zulu (zul), Noto Serif: **A**

These fonts carry their own script and little else: Noto Sans Ethiopic; Noto Naskh Arabic; Noto Sans Bengali; Noto Sans Gujarati; Noto Sans Hebrew; Noto Sans Thai;

Text set in them loses the full stops, digits and em dashes a translated sheet mixes into its own script - the characters are dropped rather than substituted, leaving holes in the page. Those languages need a Latin fallback configured before a sheet in one of them reads properly.
