

PieChartsDrawing: key vocabulary

angle	the amount of turn between two straight lines that meet at a point
degree	a unit for measuring angles; 360 of them make one full turn.
fraction	a number written as one whole split into equal parts, with a number of those parts taken
pie chart	a circular chart divided into slices to show parts of a whole.
protractor	a tool used to measure angles.
radius	the distance from the centre of a circle to its edge
sector	a slice of a circle between two radii
simplest form	a fraction written with the smallest possible numbers above and below the line.
sum	the answer when numbers are added together

Match the word to its meaning: answers

angle		a number written as one whole split into equal parts, with a number of those parts taken
degree		a circular chart divided into slices to show parts of a whole.
fraction		the amount of turn between two straight lines that meet at a point
pie chart		a fraction written with the smallest possible numbers above and below the line.
protractor		a unit for measuring angles; 360 of them make one full turn.
radius		a tool used to measure angles.
sector		the distance from the centre of a circle to its edge
simplest form		the answer when numbers are added together
sum		a slice of a circle between two radii

Match the word to its meaning: answers

angle		a number written as one whole split into equal parts, with a number of those parts taken
degree		a circular chart divided into slices to show parts of a whole.
fraction		the amount of turn between two straight lines that meet at a point
pie chart		a fraction written with the smallest possible numbers above and below the line.
protractor		a unit for measuring angles; 360 of them make one full turn.
radius		a tool used to measure angles.
sector		the distance from the centre of a circle to its edge
simplest form		the answer when numbers are added together
sum		a slice of a circle between two radii
