

CurrencyConversionGraphs: key vocabulary

axis	one of the lines a graph is measured against
bureau de change ..	a place where you change money from one currency to another
commission	a fee that is a share of the money being changed, not a fixed amount
conversion graph ...	a graph that shows how much of one currency you get for another
currency	the money used in a country
directly proportional	when one amount is multiplied by a number, the other amount is multiplied by that same number.
equation	a mathematical statement with an equals sign showing that two sides are equal.
exchange rate	the amount of another country's money that one pound buys
expand	to multiply out brackets so the expression has no brackets left
expression	a group of numbers and letters joined by operations, with no equals sign
flat fee	a fixed charge taken off every exchange, whatever the amount
gradient	how steep a line is, found by how far it rises for each step across
origin	the fixed point (0,0) on a coordinate grid.
parallel	always the same distance apart and never meeting
percentage	a number of parts out of a hundred
simultaneous equations	two or more equations with the same unknown values that are solved together.
solve	to find the value that makes an equation true
y-intercept	the value where a line crosses the vertical axis

Match the word to its meaning: answers

axis

the money used in a country

bureau de change

a mathematical statement with an equals sign showing that two sides are equal.

commission

a graph that shows how much of one currency you get for another

conversion graph

the amount of another country's money that one pound buys

currency

when one amount is multiplied by a number, the other amount is multiplied by that same number.

directly proportional

one of the lines a graph is measured against

equation

a place where you change money from one currency to another

exchange rate

a fee that is a share of the money being changed, not a fixed amount

expand

a group of numbers and letters joined by operations, with no equals sign

expression

how steep a line is, found by how far it rises for each step across

flat fee

always the same distance apart and never meeting

gradient

two or more equations with the same unknown values that are solved together.

origin

a fixed charge taken off every exchange, whatever the amount

parallel

to multiply out brackets so the expression has no brackets left

percentage

the fixed point (0,0) on a coordinate grid.

simultaneous equations

a number of parts out of a hundred

solve

the value where a line crosses the vertical axis

y-intercept

to find the value that makes an equation true
